CHAPTER 4

Discussion And CONCLUSION

CHAPTER-1
INTRODUCTION

1.1 Introduction

Welcome to the ultimate travel hub, it is a web application that helps people to plan and book trips to all over the world. It provides some significant information about tourist destinations, special offers and tour packages. It also provides some effective services which are accurate weather updates to ensure best flight and some other efficient services. Besides our web application offers some useful features which helps the people to find their desired tourist destinations within their budget and it provides an easy booking system accessible to all levels of people and our web application influence people to discover their dream destinations effortlessly with our user-friendly travel platform .Then it offers to get the best deals and services for the people which is proper just for them.

1.2 Motivation

Before developing our tourist website we visited many tourist websites but we see that they do not add some efficient features. So we have decided to develop a tourist website where we include the missing features about tourist destinations, special offers and tour packages etc. As a result user's can get the information about tourism very easily and share their thoughts by contacting us.

1.3 Objectives

We developed this website to inspire the people to explore beautiful and historical places all over the world. Besides this application provides a great opportunity for tourists to easily and comfortably travel. Then it also provides a better way to connect with various local events and festivals.

1.4 Expected Outcome

For this application, People will be able to plan and book their trips more easily and affordably. Besides, it helps the people to discover new and exciting travel destinations. Then it also helps the people to learn more about different cultures and traditions. This application will also help to grow the tourism industry.

CHAPTER-2
BACKGROUND

2.1 Introduction

At the present situation all ages of people like technology and they look at the moving world. Our website is not just a travel platform. Because it is a place where travelers can explore the latest trends, discover their dream destinations and gather a huge amount of experiences with the endless possibilities of travel around the world on our website. We start on our journey with the wonderful and rapidly growing tourism industry. Our website offers some special collections for old and new tourists, which are provided according to their choice and needs.

2.2 Related Works

To develop our website, we visited some tourist websites. One of them is "DiscoveryBangladesh.com". The main features of this website are transportation, hotels, packages ,destination, shopping etc. Another one is "travelmate.com" in which the main features of this website are booking.

hotel, shopping , destination and "about Bangladesh". This feature helps the people to know Bangladesh's history ,map ,culture and tradition, people, geography and weather. At last we visited "sharetrip.net". This website offers some exciting features which are online chatbot, visa, destination , medical and air ticket booking system for home and away.

2.3 Comparative Studies

All the visited websites are great which represent our beautiful country as well as all historical and amazing places all over the world. All of these websites offer some exciting features to attract the tourists and they give the user a better satisfaction. To analyze all the relative works we decided to develop a tourist website, in our works we have added some charismatic features which ensures the people a hassle free traveling. Those features are tourist destinations, special offers, tour packages, easy air ticket booking system home and abroad, easy contact system with authority if they face any kind of troubles, accurate weather update system. We also added some events and festivals. Besides, we are updating our website day by day to be more user friendly.
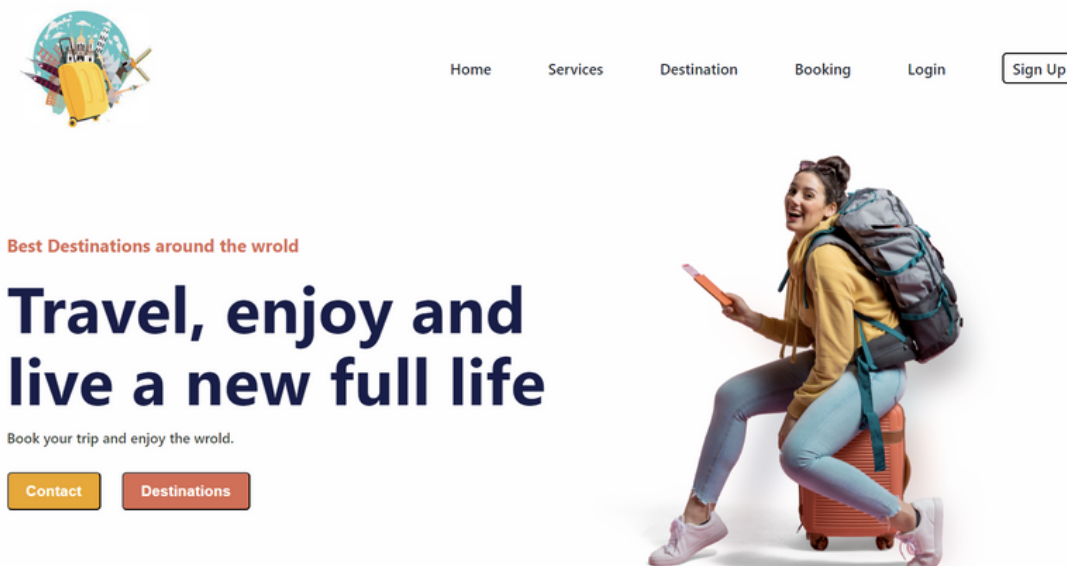

CHAPTER-3
DESIGN SPECIFICATION

3.1 Front-end Design

Front-end-design is like a manual book which guides us how a website looks and how you can use it . It includes all the things like button's position, which colors are used, text style etc. Besides, a good front-end design makes the application easy and fun for the tourists to use the website. It also makes sure the website looks good on phones, tablets, and computers. To construct this kind of design uses special codes like HTML, CSS, and JavaScript to make the pages on the website move and change when a user clicks on those things. When a website's look is good and easy to use, it encourages the people to explore and see what's inside. So we can say that front-end design plays a crucial role in shaping the user experience of a website. For this reason we try our best to construct a user-friendly design for our tourist website.

3.2 Home

3.3 Services

This is our website services page. All of our services are here:

3.4 Destination

This is our website destination page where a visitor can choose a place where he wants to go.

This is our website booking page. Where a visitor can book his destination place.

3.7 Footer

This is the footer section of our website.:

CHAPTER-4
DISCUSSION AND CONCLUSION

4.1 Discussion and Conclusion

We tried our best to finish the website by developing every page using HTML, CSS, and JavaScript etc. Although comparatively , we are using less javascript but we are trying to update our site day by day. We tried our best to create a user-friendly platform which ensures the people's best services. So we added all the necessary features which are service, destination, booking etc. As the users of our web site can be benefited when they need it.
